The launch of *Intelligence & Control* (IC) marks a milestone in our mission to provide a dedicated platform for research at the intersection of artificial intelligence, control theory, signal processing, robotics, and autonomous systems. With the publication of our inaugural issue comprising 5 peer-reviewed articles, the journal begins its scholarly journey supported by a global community of contributors—among whom our reviewers are central.

As a newly established journal, IC relies heavily on the diligence and expertise of reviewers to uphold standards of academic quality and technical innovation. Through careful evaluation of methodological soundness, experimental rigor, theoretical insight, and research relevance, reviewers have ensured that the articles in our first issue represent meaningful contributions to the field and provide a strong foundation for subsequent volumes.

We fully recognize the commitment required to provide constructive peer review—an effort that is often invisible, frequently time-consuming, and always essential. The professionalism displayed by our reviewers has enabled IC to establish its quality baseline from the outset, reinforcing its credibility as a publication venue for impactful research.

The Editorial Office expresses its sincere gratitude to all reviewers who contributed to the assessment of manuscripts included in this inaugural issue. Your service has been vital to the successful launch of IC, and we look forward to continued collaboration as the journal grows in visibility, reach, and scientific value.
