Published: day month year

Abstract: The abstract ought to succinctly convey the overall importance and theoretical progress of the research to a wide audience. It should be confined to a single paragraph and organized, such as following the IMRAD framework, to enhance clarity and accessibility. For some article types (referring to the article type details on the journal website), the abstract is not needed. Abstracts should consist of no more than 250 words and should not cite references, figures, or tables.

Keywords: keyword 1; keyword 2; keyword 3 (Min.2-Max. 6)

1. Introduction

The introduction should concisely place the study within a broader context and underscore its significance. It should define the purpose of the work and its relevance, provide a thorough review of the current state of the research field, and cite key publications. Controversial and divergent hypotheses should be highlighted where necessary. Finally, the main aim of the work should be briefly mentioned, along with the principal conclusions. The introduction should be presented in a manner that is comprehensible to scientists outside the specific field of research. References should be numbered in the order of appearance and indicated by numerals in square brackets—e.g., [1] or [2, 3], or [4–6]. For further details on references, please refer to the end of the document [7–12].

2. Main Sections

These sections represent the main body of the paper, containing the scientific presentation of the research. The material should be described in sufficient detail to enable others to replicate and extend the reported results. It is essential to make all data, computer code, and protocols associated with the publication accessible to readers upon publication. Any restrictions on the availability of materials or information should be disclosed at the time of submission. New methods and protocols should be described comprehensively, whereas well-established methods may be summarized and appropriately cited.

For research manuscripts that involve large datasets deposited in publicly accessible databases, the location of the data and relevant accession numbers should be specified. If accession numbers are not available at the time of submission, it should be noted that they will be provided during the review process. Accession numbers must be supplied before publication.

2.1. Ethics Approval Statement (if Relevant)

Our policy is to ensure that all articles published by the journal report on work that is morally acceptable. If your study involves human subjects and/or animals, you need to provide the name of the ethical approval committee/Institutional Review Board, and that you have obtained the consent form along with the approval number/ID.

The authors must be committed to the ethics of the submitted work.

Authors are expected to explain the significance of the results, relate them to existing literature, and address any limitations of the study. Simulation and experimental results have to be included if suitable for the paper's topic and possible.

2.2. Figures, Tables and Equations

Figures and tables should appear in the body of the paper near the place where they are mentioned. High-resolution images should also be uploaded separately as figure files. The figures and tables should be cited in numeric order in the text.

All image files for figures should be labeled with the figure number (label each part if the figures include multiple parts, e.g., 2A, 2B). The figure legend should be placed below each figure and should include descriptions of each figure part and identify the meaning of any symbols or arrows. Terms used for labels and in the legend must be consistent with those in the text.

Color will be used in the journal where needed (e.g., histology slides or surgical photographs). All other figures, such as bar graphs and charts, should be submitted in black and white.

Figures for papers accepted for publication must meet the image resolution requirements. Files for line-based drawings (no grayscale) should ideally be submitted in the format they were originally created; if submitting scanned versions, files should be 1200 dots per inch (dpi). Color photos should be submitted at 600 dpi and black-and-white photos at 300 dpi.

Charts and graphs can be submitted in the original form created (e.g., Word, Excel, or PowerPoint). Photographs or scanned drawings embedded in Word or PowerPoint are not acceptable for publication.

For tables, the system accepts most common word processing formats. Tables should have a title that describes the content and purpose of the table. Tables should enhance, not duplicate, information in the text.

If you include figures that have already been published elsewhere, you must obtain permission from the copyright owner(s).

2.2.1. Figures

All figures should be cited in the main text in sequential numerical order, for example, as Figure 1. It is recommended that each figure be placed immediately below the paragraph in which it is first referenced.

Figure 1. This is a figure. The same formatting guidelines apply to schemes.

2.2.2. Tables

All tables should be cited in the main text in sequential numerical order, for example, as Table 1. It is recommended that each figure be placed immediately below the paragraph in which it is first referenced.

Table 1. This is a table.

Title 1	Title 2	Title 3
entry 1	data	data
entry 2	data	data

2.2.3. Equations

The equations should be inserted in editable format. This is example 1 of an equation:

$$a = 1 \quad (1)$$

3. Discussion

All research results should be deeply discussed in this section. The discussion section reviews the research findings within the broader context of the study, integrating preceding sections to illustrate connections throughout the paper. Through interpretation, analysis, and explanation, authors elucidate the significance of their results, situating them within existing literature and acknowledging any study limitations.

Copyright and Permission to Reproduce Material (if Relevant)

If your article makes use of any previously published material (including figures/diagrams, or short extracts, or content taken from websites) then you must first obtain the written permission of the copyright owner. The copyright owner is usually the publisher (for material taken from journal or proceedings articles), website owner/company (for material taken from websites) or the author or their employer (if the work is unpublished). Some publishers will also require that you seek the permission of the original author (you will need to check the terms of the publisher's permission).

We ask you to submit written evidence:

That all necessary permissions have been obtained by providing the actual written permission granted by the copyright owner. or

That permission is not required, e.g. where the material is available under one of the Creative Commons licenses which allow commercial reuse and suits the purpose for which you want to reuse the content.

4. Conclusions

The important conclusions should be summarized in this section. Normally, you should use one paragraph to do this. The conclusions should be in accordance with the research results and discussions.

5. Biographies of the Authors

This is a short section in one paragraph.

Supplementary Materials

The additional data and information can be downloaded at: URL, Figure S1: Title; Table S1: Title; Video S1: Title.

Author Contributions

Each author is expected to have made substantial contributions to the conception or design of the work; or the acquisition, analysis, or interpretation of data; or the creation of new software used in the work; or have drafted the work or substantively revised it; AND has approved the submitted version (and version substantially edited by journal staff that involves the author's contribution to the study); AND agrees to be personally accountable for the author's own contributions and for ensuring that questions related to the accuracy or integrity of any part of the work, even ones in which the author was not personally involved, are appropriately investigated, resolved, and documented in the literature.

For research articles with multiple authors, a concise paragraph detailing each author's specific contributions must be included. Authorship should be restricted to individuals who have made significant contributions to the reported research. The following statements should be used "A.A.: conceptualization, methodology, software; B.B.: data curation, writing—original draft preparation; C.C.: visualization, investigation; D.D.: supervision; E.E.: software, validation; F.F.: writing—reviewing and editing. All authors have read and agreed to the published version of the manuscript." Please refer to the CRediT (Contributor Roles Taxonomy) for detailed definitions of each contribution role. Only those who have substantially contributed to the research should be listed as authors.

Funding

All sources of funding for the study should be disclosed. Clearly indicate grants that you have received in support of your research work and if you received funds to cover publication costs. Note that some funders will not refund article processing charges (APC) if the funder and grant number are not clearly and correctly identified in the paper.

Please add: "This research received no external funding" or "This research was funded by [name of funder] grant number [xxx]" and "The APC was funded by [XXX]" in this section. Check carefully that the details given

are accurate and use the standard spelling of funding agency names at <https://search.crossref.org/funding>, any errors may affect your future funding.

Institutional Review Board Statement

“Not applicable” for studies not involving humans or animals. You might also choose to exclude this statement if the study did not involve humans or animals.

Informed Consent Statement

“Not applicable.” for studies not involving humans. You might also choose to exclude this statement if the study did not involve humans.

Data Availability Statement

We advocate for the sharing of research data by all authors contributing to publications in Scilight journals. In this section, authors may be asked to provide the raw data of their study together with the manuscript for editorial review and should be prepared to make the data publicly available if practicable. In any event, authors should ensure accessibility of such data to other competent professionals for at least 10 years after publication (preferably via an institutional or subject-based data repository or other data center), provided that the confidentiality of the participants can be protected and legal rights concerning proprietary data do not preclude their release. In instances where novel data were not generated or data remains inaccessible due to privacy or ethical considerations, a clear statement outlining these circumstances is mandatory.

Acknowledgments

In this section, you can acknowledge any support not covered by the author’s contribution or funding sections. This may include administrative and technical assistance or in-kind donations, such as materials used for experiments. Authors should obtain permission to acknowledge from all those mentioned in the Acknowledgments section.

Conflicts of Interest

Any interest or relationship, financial or otherwise that might be perceived as influencing an author’s objectivity is considered a potential source of conflict of interest that must be disclosed.

If the authors have no conflict of interest to declare, please state “The authors declare no conflict of interest.”

If the journal editor is a co-author of the paper, the following statement must be declared “Given the role as [journal role title], [author name] had no involvement in the peer review of this paper and had no access to information regarding its peer-review process. Full responsibility for the editorial process of this paper was delegated to another editor of the journal.”

If the funder was involved in any aspect of the research, such as the selection of the research project, study design, data collection, analysis or interpretation, manuscript writing, or the decision to publish the results, the following statement must be included “The [funder name] had involvement in [description of role]. The author(s) take full responsibility for the content of the published article.”

Use of AI and AI-Assisted Technologies

If AI tools were used please indicate that “During the preparation of this work, the author(s) used [tool name/service] to [description of use]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the published article.”

Or state “No AI tools were utilized for this paper.”

Appendix A

The appendix is an optional section that can contain details and data supplemental to the main text—for example, explanations of experimental details that would disrupt the flow of the main text but nonetheless remain crucial to understanding and reproducing the research shown; figures of replicates for experiments of which representative data are shown in the main text can be added here if brief, or as Supplementary data. Mathematical proofs of results not central to the paper can be added as an appendix.

The appendix serves as an elective component within a scholarly document, offering supplementary details and data that augment the core narrative. It is a repository for intricacies of experimental methodologies, which, though vital for comprehending and replicating the presented research, might otherwise hinder the fluency of the main text.

162 Additionally, concise depictions of replicated experimental outcomes, whose prototypical data are featured in the
163 main body, can be included here, or alternatively, presented as supplementary material. Furthermore, mathematical
164 proofs pertaining to results that are not central to the paper's primary thesis can also be appended, enhancing the
165 rigor and completeness of the academic endeavor.

166 Appendix B

167 All appendix sections must be cited in the main text. In the appendices, Figures, Tables, etc. should be labeled
168 starting with "A"—e.g., Figure A1, Figure A2, etc.
